

Stem Cells and Regenerative Medicine – Where Are We Now?

This year's special guest speaker is John Clancy, PhD. Dr. Clancy is Professor and Chair of Cell Biology, Neurobiology, Anatomy and Division of Molecular and Cellular Biochemistry at the Loyola University Stritch School of Medicine in Maywood, Illinois.

Dr. Clancy will provide both an overview as well as answer many of the questions you may have on stem cell research: What are the different types of stem cells and what are their scientific applications? What does the latest research tell us about the medical promise of stem cells? What claims for stem cells are supported by research findings and which ones are false and even fraudulent claims about the role stem cells can play in treating disease? What is the future of stem cell research?

“The Leonore Annenberg Lecture is a wonderful opportunity for our guests to have one-on-one access to a world-renowned expert like Dr. Clancy,” said Phil Dombrowski, President and CEO of the Annenberg Center. “At the lecture, our guests can hear the latest information on health and medical issues, and then have the chance to speak with our expert more informally after the presentation. At each event, people are still interacting with the speaker, asking questions long after he or she has finished their talk.”

**Tuesday, February 23, 2010 at 2:30 p.m.
Free admission and open to the public**

The lecture, followed by a reception with refreshments, will be held at the

**ANNENBERG CENTER FOR HEALTH SCIENCES
AT EISENHOWER**

39000 Bob Hope Drive, Rancho Mirage, California

*Leonore
Annenberg*
LECTURE

Established in recognition of the Annenberg Center's 25th anniversary, the **Leonore Annenberg Lecture** is made possible by a generous grant provided by the Annenberg Foundation.
